1. Translate the following program into kernel language. Be careful to do a complete translation that uses only kernel language instructions! :

```
1 local F C in
2   C={NewCell 1}
3   fun {F A}
4     @A
5   end
6   C:={F C}+1
7 end
```

2. Basic concepts.
 - (a) Define "scope" in a programming language. Give an example.
 - (b) Define "contextual environment" of a procedure. Give an example.
